　　　　　　　　　I don't go into a lot of detail about some of the more obvious things like the story modes, level layouts and character designs, but I will try to keep my review here objective and objective only. Story mode seems to be pretty fun, it's a less combat-focused game and more of a role-playing game type of feel. You make your way through dungeons and towns on your way to taking on the world's greatest monster. This is probably the way I'd prefer to play it, not only is there less combat to deal with but the information about the world is provided by the character's inquisition. The information acquired allows you to make decisions on what bff6bb2d33

Any advice or comments ive left out feel free to comment? I like this a lot but I feel a load off my shoulders seeing the comments so if I have left some out please do comment :) A: how about: Make use of divs/classes instead of ids If possible, try to stick to html5 doctype Do not close tags like Styling of images and paragraphs could have been done better, but I'll leave the point at that. When it comes to: input the fieldset element should have clear: both; instead of the fieldset element. Well, thats what it looks like to me. Unless there is a reason you want it to be floating. Q: Javascript onclick I need a javascript function that can fire and say that a div has been clicked and then return that div back to normal without firing it again. Does that make sense? Thanks, Sam A: If you mean to say that you want to toggle the visibility of a div like this, please see this post. jQuery has many methods for toggling the visibility like.hide() and.show(). You can also toggle the visibility of the element by calling $("yourdiv").toggle() or even $("yourdiv").toggleClass("active") (for classes of course). 1.
